

Failure triggers and conservative behavior

Representative locally exercised conditions; not exhaustive fault coverage.

Trigger	Safe response
Arguments, route or policy changed	Reject prior approval binding; require a new evaluation.
Approval consumed or expired	No second forwarding-attempt record or credential use.
Newer coverage degradation	Block mutation before credential-consuming operation.
Stale consumed dispatch; no outcome	Persist UNKNOWN / possible partial effects; do not retry.
Invalid provenance, schema or secret-bearing result	Withhold, quarantine or redact before release.
Required persistence unavailable	Fail closed; no runtime in-memory fallback.
